

Organ console repair, restoration and updating services.

Klann Organ Supply has over it's 96 years developed a reputation for building many of the finest traditional organ consoles in the world.

The same skills and knowledge we use to build our own consoles are also available to you, the organ builder in your organ maintenance and restoration projects.

The scope of our possible involvement for the organ builder in his projects may range from adding new side jams, to replacing all components in the original console and reffurbishing the console to the desired specifications.

Ask us for our suggestions.

Many of our clients are not sure which way to procede on an aspect of the project, while some know exactly what they need us to do. We are always here to answer questions and offer suggestions. The high speed internet allows us to receive digital photos of the console and console details in just minutes and when needed we encourage you to send us your request along with photos if possible.

If you're looking for advice on which of the many new electronic and digital systems are best for the restoration or updating of the console you are working on, give us a call.

We will quote in a timely fashion all operations needed to be performed after the scope and details of the work and materials are defined.

We're a family run company.

Klann Organ Supply probably looks a good bit like your shop, only maybe bigger. Our family has been doing this for nearly 100 years.

In the console rebuilding and component assembly area we have experienced staff, each specializing in certain aspects of console rebuilding. They're folks like you, who enjoy their craft.

The hands and minds of the people of Klann at work.
